Tips

- >> Update actuals weekly -- don't wait until the category is maxed out.
- >> If a category hits 80%, pause and re-allocate from contingency or another category.
- >> The contingency should stay above 5% of total until the final punch list.
- >> Track every receipt, even the \$12 one -- small costs add up fast.
- >> Compare variance across categories to spot where you're over or under-spending.
